

SUBSTITUTED BIPHENYL-4-CARBOXYLIC ACID ARYLAMIDE ANALOGUES

ABSTRACT OF THE DISCLOSURE

Substituted biphenyl-4-carboxylic acid arylamide analogues capable of modulating receptor activity, are provided. Such ligands may be used to modulate receptor activity *in vivo* or *in vitro*, and are particularly useful in the treatment of pain and other conditions associated with receptor activation in humans, domesticated companion animals and livestock animals. Pharmaceutical compositions and methods for treating such disorders are provided, as are methods for using such ligands for receptor localization studies.
